

# W❄️INTERGRAZER 70 RYE

The most cold tolerant of all small grains. Will continue to grow at lower temperatures.

Grows well on poorer soils with low pH.

Under good growing conditions, provides an immediate pasture of high quality grazing within 45 - 60 days after planting.

Put your bermuda, bahia and other warm-season pastures to work for you in the late fall and winter with Wintergrazer 70 Rye.

Because it is early maturing, Wintergrazer 70 won't interfere with spring green-up of warm season perennial grasses.

Use in combination with Passerel Plus annual ryegrass to provide excellent quality grazing from late fall until early summer.
